alphaDATA®

alphaDATA®

Production efficiency

alphaDATA® is an innovative system for capturing your operating data (Factory Data Capture) and opens up new possibilities for increasing production efficiency. The monitoring and data acquisition system gives you real-time access to production data. This allows your team to make quick decisions that improve your processes.

Properties of the alphaDATA®-System:
- The solution is directly coupled with the plant's control system.
- Data is collected and processed in real time.
- Production events are stored and archived in a log file. Traceability guarantees a complete history of the production data.
- The alphaDATA® system and the data it provides support your quality management.
- The alphaDATA® system can be adapted to extensions or conversions.

Advantages of alphaDATA®

✓ The operating data acquisition system provides an overview of all relevant operating data – immediately and precisely.

✓ Real-time data acquisition and direct coupling with the plant's control system allow you to change parameters at an early stage of the process, ensuring continuous and efficient production.

✓ With our solution you meet the requirements for traceability in the event of a vigilance case.
